SYLLABUS

CLASS 1: UNDERSTANDING CIVIL LITIGATION IN THE UNITED STATES: THE PROBLEMS AND POTENTIAL OF PUNITIVE DAMAGES

Perhaps the most famous case in the United States involves McDonald's. In that case, an elderly woman spilled hot coffee on herself suffering severe burns. She sued McDonald's and won a \$2.1 million dollar punitive damage verdict. Many people think the case is a great example of problems in the American system of litigation. Others see this case as an excellent example of the American litigation system working well to protect consumers. What about US litigation is different than in the EU? Can juries in the US be entrusted to decide whether punitive damages should be awarded in cases like this? We will then focus on the Supreme Court and its efforts to control "runaway juries."

CLASS 2:

PART A: DUE PROCESS AND CONTROL OF PUNITIVE DAMAGES: BMW V. GORE

In response to the perceived crisis of punitive damages, the Supreme Court eventually held that the "due process" guarantees in the Constitution required that courts review the amount of all punitive damages awards. In BMW v. Gore, the Court established a three-part test which was then later refined in State Farm v. Campbell. What is this test and does it work effectively to control "runaway juries?"

PART B: GETTING A LAWSUIT STARTED: THE AMERICAN "LIBERAL" APPROACH TO LAWSUITS

The first phase of the American litigation process is known as the "pleadings" stage and involves the initial description of the claims involved in the case. As compared to other litigation systems, the American system is a "liberal" one meaning that it has traditionally been very easy to begin a lawsuit. This class will describe the American approach and discuss its relative advantages and weaknesses.

CLASS 3: CONTROLLING "JUNK" CASES: THE AMERICAN "LIBERAL" APPROACH TO LAWSUITS

In the past few years, the United States Supreme Court has decided two important cases that have changed the traditional "liberal" approach to pleading. Those who represent defendants hail the change as a good thing that will protect legitimate interests. Others – those representing plaintiffs – see the new approach as a dangerous and very un-American response that will make the US system less responsive to ensuring just results. We will look at the cases and explore the recent controversy. A related issue is how to identify and deal

Universidad de Navarra

with attorneys who file frivolous cases. How much investigation should attorneys do before deciding to file a lawsuit? What should happen to the attorney if it turns out not to be a good claim?

CLASS 4: INTRODUCTION TO AMERICAN DISCOVERY

Another important aspect to understanding the American system is its reliance on extensive "discovery" that permits parties to investigate the claims. Each side can seek wide-ranging information from their opponents. This can result in ensuring just results as all parties have access to relevant information, but it can also result in great delay and expenses. This section will provide an introduction to the tools used in the discovery process. We will also focus on the "scope of discovery" – what is it that American litigation permits you to investigate.

CLASS 5: CONTROLLING DISCOVERY

There are serious potential problems with a "liberal" discovery system as employed in the United States. It can cost a great deal as parties explore all aspects of a case, sometimes forcing parties to give up or settle the case. It can cause delays, and thus deny a quick resolution of a matter. It can also result in invasions of privacy. The concern with the potential abuse of discovery has become even a greater concern in a world in which so much information exists in a digital format. Cases in which there used to be thousands of documents now have millions of "electronically stored information" or ESI documents. How can US courts control discovery effectively?

CLASS 6: THE ADVERSARIAL EXPERT: THE USE AND MISUSE OF EXPERT WITNESSES IN US LITIGATION

Expert witnesses play a critical role in American litigation. In most cases, the parties routinely hire one or more "expert" witnesses who are often critical in presenting the case. In most other countries, expert witnesses are used less frequently, and often need to be approved or even selected by the court. Who are these experts? Are they in fact well-qualified? How does the American system control the qualifications of experts?

CLASS 7: UNDERSTANDING THE SUMMARY JUDGMENT PROCESS

American civil procedure is focused on preparing a case for trial, usually before a jury. Jury trials are often long and expensive, and present great risk to defendants should they lose. Given a liberal pleading and discovery system, what prevents weak claims from going before sympathetic juries who might find in favor of injured plaintiffs? A critical part of the US system is the motion for summary judgment in which the court can assess whether the case has sufficient merit to proceed to trial.

CLASS 8: THE JURY IN AMERICAN LITIGATION

The jury is a venerable institution in the United States. While most countries have abandoned or greatly limited the use of the jury in civil cases, it remains the centerpiece of the resolution process in the US. Indeed, the right to trial by jury is included in the US Constitution. This has profound consequences for the civil justice system. We will explore the nature of the constitutional right to a jury trial and then explore how a jury is actually selected in the US.

CLASS 9: ALTERNATIVES TO LITIGATION IN THE US: ARBITRATION

In an effort to improve the litigation process and/or to lower costs, alternatives to litigation have greatly expanded in the United States. For example, in most countries, arbitration is

routinely used to handle commercial disputes or international matters. In the United States, however, the use of arbitration is more controversial. Consumers do not want to be forced into arbitration where there are no juries.

CLASS 10: AMERICAN PERSPECTIVES ON JURISDICTION: WHERE TO FILE YOUR CASE AND THE CONCEPT OF PERSONAL JURISDICTION

The United States is a very large country. It has fifty states each of which exercises governmental power through its own system of state courts. Indeed, the large majority of cases are filed in state courts in the United States and not in our federal (national) court system. Many cases involving disputes between people or companies from different states. How do we decide which state has the power to handle the lawsuit? Plaintiffs may well do "forum shopping" and file their case in one state because they think they will get a better result. This raises a very important issue in the United States involving what courts have "personal jurisdiction" over a particular defendant.

EDUCATIONAL ACTIVITIES

The time distribution of the student's workload measured in hours is the following:

- Theory in-class instruction and discussion periods: 15 h
- Practical in-class periods: 15 h
- Pre-class preparation of reading assignments /research/case solving: 15 h
- Personal study and exam preparation (personal notes and notebooks): 30 h
- Reaction papers to videos: 15 h
- Examination: 5 h

EVALUACIÓN

CONVOCATORIA ORDINARIA

Your grade for the course will be based on your performance on the final examination, which will be proctored on a date and time, to be announced, after the course ends. Although your work on the final examination is expected to be entirely your own, the exam will be "open book" and "open notes." The slides covered in the course, as well as a review document, will also be available to you when you take the final.

Your regular, active, and insightful participation in class discussions each week is important. I expect everyone to have completed the readings each week and to come to class prepared to participate in our discussions.

CONVOCATORIA EXTRAORDINARIA

Your grade will come entirely from your June exam.

OFFICE HOURS

Universidad
